Personal
Cushion
System*

Recommendations for Appropriate Seating Selection Based on Individual Patient/Medical Needs: ¹

Small to average adult with normal sensation, reasonable weight shifting abilities, and little or no skeletal deformity. No skin break down.

Example:

Low back pain, cardiopulmonary decondition.

HCPCS Code: E2601

COMFORT AND PRESSURE REDUCTION AT HOME AND AWAY

The conforma**Med** Model 700 is a lightweight, low-cost pressure-reducing seat cushion that offers comfort and protection in an easy to carry, fluid resistant and attractive package. The multilayer laminated foam technology (patented) utilizes *shape memory[™]* materials to provide a comfortable, non-collapsing support and protection from moderate pressure. Low-density materials make the Model 700 one of the lightest cushions available. The cushions are very durable and will provide quality service for a long period of time.

PATENTED MATERIALS COMPOSITE OFFERS SUPERIOR PRESSURE REDUCTION

Competitively priced cushions using traditional foam inserts may produce pressure “**hot spots**” that can result in poor circulation, soft tissue breakdown and discomfort.

The performance materials in the conforma**Med 700** self-contour to match the user’s shape and stay resilient for comfort, pressure relief, and support.

MODEL 700 FEATURES:

- Pressure reduction in the critical coccyx and ischial areas
- Reduction of vascular loading in the seat and legs
- Stable support for hips and lower back
- Incontinence resistant, washable cover with nonskid bottom.
- Low-profile design for seating stability
- Lightweight for easy transportability
- Convenient carrying handle
