

conforma**Med**®

Model 7000 B

The new standard for advanced postural stability and pressure management for bariatric patients.

Recommendations for Appropriate Seating Selection Based on Individual Patient/Medical Needs: ¹

Average to morbidly obese adult with high risk for pressure ulcer development secondary to lack of motor control or sensation, poor nutrition, severe bony malalignment or existing grade II to grade IV ulcer may exist.

Example:

Obese patient, Spinal cord injury or multiple sclerosis with tetraplegia, neuromuscular disorders, cerebral palsy, severe brain injury.

Maximum Seating weight: 500 Lbs

HCPCS Code: E2608

A NEW STANDARD IN BARIATRIC PRESSURE MANAGEMENT

The unique design of the conforma**Med** 7000 **B** cushion system is based on a highly engineered composite of *shape memory* materials that self-mold to the user's individual body contours. The specially designed cushion provides for the greater load bearing needs of the bariatric patient. Further, integral components channel the legs and position the spine to ensure postural stability and provide a custom fit that significantly improves long-term seating comfort, while providing superior protection from pressure ulcers.

PRESSURE REDUCTION = COMFORT + TISSUE PROTECTION

Competitive cushions may cause higher pressure that may result in poor circulation, soft tissue breakdown and discomfort. These products may offer marginal postural support and may collapse the supporting materials due to the increased weight of the patient.

MODEL 7000 **B** FEATURES:

- Optimal pressure reduction for the sensitive ischial and coccyx prominences
- Self-contouring *shape memory* materials and advanced suspension system provide neutral spine and leg positioning
- Significant reduction of vascular loading in the seat and legs for chronic pressure management
- Equilateral support for pelvic obliquity
- Incontinence resistant, washable all-way stretch polyester cover for moisture protection
- Designed for greater stability and ease of mobility
- **Removableommel**

The conforma**Med** 7000 **B** self-contours to match the patient's shape, and redistributes body weight away from at-risk areas. The cushion provides for enhanced pelvic stability and stays resilient for superior pressure management and postural stability for bariatric patients.

SPECIFICATIONS

DESCRIPTION:

- High-comfort seat cushion for long-term pressure management and postural stability. Patented
- Available for flat or sling-bottom manual and motorized chairs with nonskid bottom and Velcro-type gripper pads; carrying handle

COLOR:

- Black

OPTIONS:

- May specify the placement of positioning components N/C
- Inner incontinence cover available N/C

WEIGHT:

- Approximately 5 lbs.

COVER:

- Coated all-way stretch covers are incontinence resistant and removable for cleaning.

WARRANTY:

- 18 Mos. (limited)

SIZES:

	W	D	H
7074	23	18	4
7075	23	20	4
7076	24	16	4
7077	24	17	4
7078	24	18	4
7079	24	19	4
7080	24	20	4
7081	25	16	4
7082	25	16	4
7083	25	18	4

¹ Information supplied by Darryl Kaelin M.D.

This cushion is also available in custom sizes for larger patients with increased load bearing needs.
