cMed BK Ultra

*The Choice
for Positioning
Back Cush-
ions*

Recommendations for Appropriate Seating Selection Based on Individual Patient/Medical Needs:

Description: Average to large adult size with needs for spinal alignment and lateral support.

Example: Alzheimers disease, paralysis agitons, Huntingtons chorea, genetic torsion dystonia, MS, flaccid hemiplegia, etc.

COMFORT, PRESSURE REDUCTION AND LOW COST

The cMed Model BK Ultra offers a **deep contoured positioning** cushion system with a combination of technologies resulting in a cost-effective back cushion system that molds itself to the user's individual needs, providing excellent weight distribution while maintaining firm, non-collapsing support.

The cushion is designed to allow the patient to be in a positioned mode. The lateral supports are designed to provide pronounced truck support by preventing the patient from moving from side to side.

High-tech *shape-memory™* polymers are combined with low-weight resilient foams to provide seating comfort and long-term comfort. Low-density materials and an incontinence resistant all-way-stretch cover minimize heat retention and shear .

MODEL BK Ultra FEATURES:

- Deep contoured posterior lateral back cushion
- Self-contouring *shape memory* materials to provide soft cushioning yet resist bottoming out
- Uniform support
- Minimal weight for improved mobility
- Lumbar support
